source: European Commission services

April 2019: Economic Sentiment decreases markedly in both the euro area and the EU

In April 2019, the *Economic Sentiment Indicator* (ESI) decreased markedly in both the euro area (by 1.6 points to 104.0) and the EU (by 1.5 points to 103.7).¹

Euro area developments

The deterioration of euro-area sentiment resulted from lower confidence in industry, retail trade and, to a lesser extent, in construction and among consumers, while confidence remained unchanged in services. Amongst the largest euro-area economies, the ESI rose only in the Netherlands (+0.4), while it decreased in France (−1.0) and Italy (−1.0) and, more significantly so, in Germany (−1.5) and Spain (−2.6).

The strong decrease in **industry confidence** (−2.5) resulted from managers' more pessimistic views on all three components, i.e. *production expectations*, the *current level of overall order books* and the *stocks of finished products*. Of the questions not included in the confidence indicator, manufacturers' assessments of the *past production* deteriorated significantly, too, whereas there was some relief in the appraisals of *export order books*. Unchanged **services confidence** (0.0) resulted from managers' more negative views on the *past business situation* being offset by brighter *demand expectations*, while their assessment of *past demand* remained virtually unchanged. The decrease in **consumer confidence** (−0.7) reflected households' more pessimistic *expectations* about their *future financial situation* and, in particular, the *general economic situation*, while their assessments of their *past financial situation* and their *intentions to make major purchases* remained broadly stable. The strong decline in **retail trade confidence** (−1.4) was driven by more negative views on both the *present* and *expected business situation*, while retailers' assessment of the adequacy of the *volume of stocks* remained broadly stable. Decreasing **construction confidence** (−0.8) reflected managers' more pessimistic *employment expectations*, while their assessment of the *level of order books* improved. Finally, **financial services confidence** (not included in the ESI) fell (−7.7), reflecting strong deterioration in managers' assessment of *past demand* and the *past business situation*, while *demand expectations* improved.

Employment plans saw a significant deterioration in construction and, to a lesser extent, in industry, while employment plans remained broadly unchanged in services and retail trade. **Selling price expectations** increased slightly in retail trade, while they decreased markedly in industry and construction and remained virtually stable in services. Also consumer price expectations dropped in April.

EU developments

The commensurate decline of the headline indicator for the EU (−1.5) reflects the strong deterioration of sentiment in the largest non-euro area EU economies, the UK (−1.5) and Poland (−3.7). In line with the euro area, EU industry confidence took a blow and consumer sentiment weakened. While the deterioration of EU confidence in retail trade was less marked than in the euro area, EU confidence in construction worsened more strongly. Yet, EU

¹ Business confidence indices for France were revised compared to the March press release; the net effect is an upward revision of the ESI for March of 0.1 points in the euro area (to 105.6) and 0.2 points in the EU (to 105.2).

confidence in services improved slightly. As regards financial services confidence, the drop in the EU aggregate was in line with euro-area developments.

Managers' employment expectations were more optimistic than in the euro area. They remained virtually stable in industry and improved markedly in services and retail trade. In construction, the deterioration of employment expectations was less strong than in the euro area. Price expectations declined in line with those for the euro area in industry and construction; they also decreased in retail trade and services.

Quarterly survey results (conducted in April)

In the euro area manufacturing sector, the estimated rate of capacity utilisation decreased to 82.8% (0.8 points lower than in the previous survey carried out in January). Accordingly, the share of managers assessing their current production capacity as 'more than sufficient' (in view of current order books and demand expectations) increased strongly (+5.4 points). On the external side, managers' export volume expectations worsened notably (−4.1), as did their assessment of their competitive position on foreign markets outside the EU over the past three months (−1.3). Yet, managers expressed some relief concerning developments in new orders (+1.5) and the estimated number of months' production assured by orders on hand increased to 4.4 months (+0.5 months). EU-wide developments were qualitatively in line; the estimated rate of capacity utilisation also decreased (to 82.5%, 0.7 points lower than in January).

In April 2019, capacity utilisation in services remained broadly stable in the euro area (−0.1 points to 90.7%) and decreased in the EU (−0.6 points to 89.4%).

Industrial investment survey (conducted in March/April)

According to the bi-annual investment survey carried out in March/April this year, real investment in the manufacturing industry is expected to increase by 4% in the euro area in 2019, unchanged from the growth managers had expected in the previous survey of October/November 2018. As for real investment in 2018, managers now estimate it to have increased by 4%, 1 percentage point below their expectation in the October/November survey. In the EU, real manufacturing investment in 2019 is estimated to grow slightly slower than in the euro area (+3%), down from the 4% expected in October/November. As regards 2018, the current estimation points to a 5% increase, in line with the previous survey in October/November.

In the tables: (s.a.) = seasonally adjusted, (n) = not seasonally adjusted, : = not available.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/1990.

The economic sentiment indicator is composed of the industrial confidence indicator (40%), the service confidence indicator (30%), the consumer confidence indicator (20%), the construction confidence indicator (5%), and the retail trade confidence indicator (5%). Its long term average (1990-2018) equals 100. The reported ESI average is based on this standardisation sample. All confidence indicators are balances.

The country weights have been updated in January 2019.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/1990.

(a) The indicator is the arithmetic average of the balances (%) of the questions on production expectations, order-books and stocks (the last with inverted sign).

(b) Highest figure is considered as a minimum, lowest figure is considered as a maximum.

TABLE 2a: Quarterly survey of manufacturing industry (s.a.)

(Data collected in January, April, July and October each year.)

Capacity utilisation in manufacturing industry (%)

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 1990.

(a) Answers to the questions whether, taking into account the level of order-books or production, capacity is more than sufficient (+), sufficient (=) or less than sufficient (-). Thus, negative balances (capacity less than sufficient) indicate high levels of capacity utilisation, whereas positive balances (capacity more than sufficient) are associated with low levels of capacity utilisation.

(b) Balances: i.e. differences between the percentages of respondents giving positive and negative replies.

(a) The indicator is the arithmetic average of the balances (%) for the questions on business situation and recent and expected evolution of demand.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/1990.

TABLE 3a: **Quarterly survey of services (s.a)**

(Data collected in January, April, July and October each year.)

Capacity utilisation in services (%)

(a) The indicator is the arithmetic average of the balances (%) for the present and the future business situation, and for stocks – with inverted sign.

(b) United Kingdom: refers to the volume of sales for the time of the year.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/1990.

(a) Data are not seasonally adjusted.

(b) The confidence indicator is the arithmetic average of the balances (%) for the questions on business situation and past and expected evolution of demand.

(c) Component of the confidence indicator.

Information

The Directorate-General Financial and Economic Affairs (DG ECFIN) of the European Commission publishes the Business and Consumer Survey Results every month. The issues of January, April, July and October also include the quarterly survey results for the manufacturing industry and consumers. The April and November issues also include the investment survey results.

The data of the surveys is processed by DG ECFIN's Unit Economic situation, forecasts, business and consumer surveys (A3), Sector Business and consumer surveys and short-term forecast.
