

Business and consumer survey results for March 2021

Economic Sentiment and Employment Expectations sharply improving in both the EU and the euro area

In March 2021, the *Economic Sentiment Indicator* (ESI) improved sharply in both the EU (+6.9 points to 100.0) and the euro area (+7.6 points to 101.0). For the first time since the outbreak of COVID-19 on the continent, the ESI is back at (EU), or slightly above (EA), its long-term average. Also the *Employment Expectations Indicator* (EEI) saw a forceful increase (+6.1 points to 98.0 in the EU and +6.8 points to 97.7 in the euro area), bringing the indicator in both regions close to its long-term average.

EU developments

Graph 1: EU Economic sentiment & Employment expectations (s.a.)

source: European Commission services

In the EU, the ESI's increase in March was driven by improving confidence in all surveyed business sectors (i.e. industry, services, retail trade, construction) and among consumers. The increases were of a magnitude not seen since last summer's steep recovery following the first phase of the pandemic. Amongst the largest EU economies, Germany stood out with the largest monthly improvement of its ESI on record (+7.9) and is currently the only of the 'big-6' countries where sentiment returned to above its long-term average. The monthly increases in sentiment in the other big countries were nevertheless very significant, too: Spain (+6.2), France (+5.4), Italy (+4.9), the Netherlands (+4.4), Poland (+3.3).

Industry confidence increased for the fourth month in a row (+4.6), thanks to very positive developments in all its components, i.e. managers' *production expectations*, their assessments of the *current level of overall order books* and the adequacy of the *stocks of finished products*. The assessment of stocks is actually approaching historical scarcity levels. Of the questions not entering the confidence indicator, both managers' views on *export order books* and their appraisals of *past production* improved. **Services confidence** (+7.0) posted the first sharp pick-up since September last year, driven by managers' much more optimistic *demand expectations* and, to a lesser extent, more positive views on the *past business situation* and *past demand*. At the level of sub-sectors, the surge in services confidence was rather broad-based, ranging from real estate, over information services, to advertising, market research, legal/accounting and other business support activities, but also including accommodation and gastronomy. **Consumer confidence** firmed (+3.6), as households' expectations improved both in respect of the *general economic situation* in their country, and their personal situation, as measured by their *future financial situation* and their *intentions to make major purchases*

Graph 2: EU confidence indicators¹

¹ The graph presents standardised series to correct for differences in means and standard deviations.

(the latter registered the second largest improvement on record). Consumers' views on their *past financial situation*, by contrast, showed no signs of a recovery from their COVID-induced slide, improving only marginally on the month. The rise in **retail trade confidence** (+6.1) reflected marked improvements in all components of the indicator, namely managers' assessments of the *past business situation*, the adequacy of the *volume of stocks* and their *expected business situation*. **Construction confidence** brightened (+4.4) thanks to managers' significantly improved *employment expectations* and appraisals of the *level of order books*. When compared to the other sectors, the improvement in **financial services confidence** (not included in the ESI) was comparatively mild by the standards of the typical fluctuations of the indicator (+5.2). All its components improved, i.e. managers' appraisals of *past demand* and the *past business situation*, as well as their *demand expectations*.

Graph 3: **Business situation (past 3 months) in the EU¹**

Graph 4: **Business expectations (next 3 months) in the EU¹**

The forceful increase of the **Employment Expectations Indicator** in March (+6.1) was driven by more optimistic employment plans in all surveyed business sectors, i.e. industry (where they are now firmly above the pre-crisis level of February 2020), services, retail trade and construction. Correspondingly, consumers' unemployment expectations, which are not included in the headline indicator, receded.

Selling price expectations surged in all surveyed parts of the economy, i.e. in industry (which saw the largest monthly increase on record), services, retail trade and construction. Also consumer price expectations increased.

Graph 5: **Employment expectations (next 3 months) in the EU¹**

Graph 6: **Price expectations (next 3 months) in the EU¹**

Graph 7: **Consumer expectations (next 12 months) in the EU**

Graph 8: **EU Financial services confidence indicator**

Data collection period: 1 March to 24 March

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/2000.

(a) The indicator is the arithmetic average of the balances (%) of the questions on production expectations, order-books and stocks (the last with inverted sign).

(b) Highest figure is considered as a minimum, lowest figure is considered as a maximum.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/2000.

(a) The sum of the replies for each Member State are weighted in the Community total with the value of consumers' expenditure.

(b) The indicator is the arithmetic average of the balances (%) of four questions: the financial situation of households over the last 12 months and over the next 12 months, the general economic situation over the next 12 months, and major purchases over the next 12 months.

(c) Historical consumer survey data have been revised to account for a structural change in the way data is collected in Germany. The change does not only have an impact on German data, but also on the aggregate euro-area and EU time-series.

(d) Results for question 7 are not seasonally adjusted.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/2000.

(a) The indicator is the arithmetic average of the balances (%) for the present and the future business situation, and for stocks – with inverted sign.

(a) Data are not seasonally adjusted.

(b) The confidence indicator is the arithmetic average of the balances (%) for the questions on business situation and past and expected evolution of demand.

(c) Component of the confidence indicator.

Methods and definitions

The Commission's harmonised Business and Consumer Survey (BCS) programme, managed by the Directorate-General for Economic and Financial Affairs (DG ECFIN), was set up in 1961, and its scope has since expanded considerably in terms of both countries and sectors covered. Six surveys are conducted on a monthly basis in the following areas: manufacturing industry, construction, consumers, retail trade, services, and financial services. Some additional questions are asked on a quarterly basis in the January, April, July and October surveys in industry, construction, services, financial services and among consumers. In addition, questions on manufacturing companies' investment plans are included twice a year (April and November). The surveys are conducted by national institutes in the Member States and the candidate countries based on harmonized questionnaires and a common timetable.

The data of the surveys is processed by DG ECFIN's Unit Economic situation, forecasts, business and consumer surveys (A3), Sector Business and consumer surveys and short-term forecast.

The **confidence indicators** are produced to reflect overall perceptions and expectations at the individual sector level in a one-dimensional index. For each of the six surveyed sectors, they are calculated as the simple arithmetic average of the (seasonally adjusted) balances of answers to specific questions chosen from the full set of questions in each individual survey.

The **Economic Sentiment Indicator (ESI)** is a composite indicator combining judgements and attitudes of businesses (in industry, construction, retail trade, services) and consumers by means of a weighted aggregation of standardised input series.

The **Employment Expectations Indicator** is constructed as a weighted average of the employment expectations of managers in four surveyed business sectors (i.e. industry, services, retail trade and construction).

More information on methods and definitions can be found in the [methodological guidelines](#) section of the [BCS website](#). All press releases can be found [here](#). Detailed data results of all surveys are freely available for download in the BCS [time series](#) section of the website.
