April 2018: Economic Sentiment stabilises in both the euro area and the EU

In April, the *Economic Sentiment Indicator* (ESI) remained unchanged in the euro area (at 112.7 points) and broadly stable in the EU (-0.3 points to 112.3)¹. The indicators stabilised following three consecutive drops and remain at elevated levels.

Euro area developments

Unchanged euro area sentiment resulted from drops in the retail trade, services and construction sectors which were counterbalanced by industry confidence holding broadly steady and consumer confidence edging up. Amongst the largest euro area economies, the ESI rose markedly in Spain (+1.6) and France (+1.1), while it remained stable in Germany (+0.0), decreased slightly in Italy (-0.4) and dropped strongly in the Netherlands (-2.3).

Broadly stable **industry confidence** (+0.1) was the result of managers' markedly improved *production expectations* meeting a worsened assessment of the *current level of overall order books*, while their assessments of the *stocks of finished products* remained virtually unchanged. Of the questions not included in the confidence indicator, both managers' assessment of *past production* and *export order books* worsened markedly. The decline in **services confidence** (-1.0) was driven by managers' significantly worsened assessment of the *past business situation*, and more pessimistic appraisals of *past demand*, while their *demand expectations* remained stable. Edging up **consumer confidence** (+0.3) reflected households' historically optimistic expectations regarding *future unemployment*, improved *savings expectations* and slightly brighter views on their future *financial situation* being partly offset by their markedly more negative assessment of the *future general economic situation*. The drop in **retail trade confidence** (-1.3) was fuelled by markedly deteriorating appraisals of the *past business situation* and worsening views on the adequacy of the *volume of stocks*, while managers' expectations regarding the *future business situation* remained broadly flat. The slight decrease in **construction confidence** (-0.7) resulted from downward revisions in both managers' *employment expectations* and their assessment of the level of *order books*. Finally, **financial services confidence** (not included in the ESI) held broadly steady (+0.3) as a result of a strong improvement in managers' assessment of the *past business situation* being almost offset by markedly worsened appraisals of *past* and *expected demand*.

Employment plans saw a downward revision in industry and construction, but remained broadly unchanged in services and the retail trade sector. **Selling price expectations** decreased markedly in construction and industry and, more slightly so, in retail trade, while they increased in services. Consumer price expectations remained flat in April.

EU developments

The marginally weaker outcome for the headline indicator for the EU (-0.3) resulted from slightly deteriorating sentiment in both the UK (-0.4) and Poland (-0.7). While confidence in services and retail trade worsened in line with the euro area, EU industry and construction confidence improved. In contrast with euro area developments, EU confidence among consumers and in the financial services sector fell slightly.

¹ Business confidence indices for Germany and France were revised compared to the March press release; the net effect is an upward revision of the ESI for March of 0.1 points in both the euro area (to 112.7) and the EU (to 112.6).

Similarly to the euro area, EU managers in industry reported a slight downward revision in their employment expectations, while they expected – as opposed to the euro area – an improvement in construction and a worsening in services. Price expectations were broadly in line with those in the euro area for industry and construction, where managers expected prices to decrease considerably; however, prices were expected to rise in retail trade and remain broadly stable in services.

Quarterly survey results (conducted in April)

In the euro area manufacturing sector, the estimated rate of *capacity utilisation* edged down to 84.4% (0.3 points lower than in the previous survey carried out in January). Accordingly, the share of managers assessing their *current production capacity* as 'more than sufficient' (in view of current order books and demand expectations) increased marginally (+0.3 points). On the external side, managers' *export volume expectations* worsened notably (-1.9), as did their assessment of their *competitive position on foreign markets outside the EU over the past three months* (-2.7). Finally, managers' appraisals of developments in *new orders* deteriorated (-1.4) and the *estimated number of months' production assured by orders on hand* remained unchanged at 3.9 months. In the EU, the estimated rate of *capacity utilisation* remained stable at 84.1%, but EU managers' *export volume expectations*, their assessment of their *competitive position on foreign markets outside the EU* and developments in *new orders* weakened somewhat more markedly than in the euro area in April.

In April 2018, *capacity utilisation* in services remained unchanged in the euro area at 90.2% and increased slightly in the EU (+0.3 points to 90.0%).

Industrial investment survey (conducted in March/April)

According to the bi-annual investment survey carried out in March/April this year, real investment in the manufacturing industry is expected to increase by 7% in the euro area in 2018. This is a significant upward revision from the 4% growth managers had expected in the previous survey of October/November 2017. As for real investment in 2017, managers now estimate it to have increased by 5%, 2 percentage points above their expectation in the October/November survey. In the EU, real manufacturing investment in 2018 is estimated to grow slightly slower than in the euro area (+6%). Compared to the euro area, the upward revision vis-a-vis the October/November survey, which had indicated 4% growth, was milder. As regards 2017, the current estimation points to a 5% increase, up from 4% as estimated in October/November.

In the tables: (s.a.) = seasonally adjusted, (n) = not seasonally adjusted, : = not available.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/1990.

The economic sentiment indicator is composed of the industrial confidence indicator (40%), the service confidence indicator (30%), the consumer confidence indicator (20%), the construction confidence indicator (5%), and the retail trade confidence indicator (5%). Its long term average (1990-2017) equals 100. The reported ESI average is based on this standardisation sample. All confidence indicators are balances.

The country weights have been updated in January 2018.

(a) Business surveys for Ireland have been temporarily discontinued as from 05/2008.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/1990.

(a) The indicator is the arithmetic average of the balances (%) of the questions on production expectations, order-books and stocks (the last with inverted sign).

(b) Highest figure is considered as a minimum, lowest figure is considered as a maximum.

TABLE 2a: Quarterly survey of manufacturing industry (s.a.)

(Data collected in January, April, July and October each year.)

Capacity utilisation in manufacturing industry (%)

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 1990.

(a) Answers to the questions whether, taking into account the level of order-books or production, capacity is more than sufficient (+), sufficient (=) or less than sufficient (-). Thus, negative balances (capacity less than sufficient) indicate high levels of capacity utilisation, whereas positive balances (capacity more than sufficient) are associated with low levels of capacity utilisation.

(b) Balances: i.e. differences between the percentages of respondents giving positive and negative replies.

(a) The indicator is the arithmetic average of the balances (%) for the questions on business situation and recent and expected evolution of demand.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/1990.

TABLE 3a: **Quarterly survey of services (s.a.)**

(Data collected in January, April, July and October each year.)

Capacity utilisation in services (%)

(a) The indicator is the arithmetic average of the balances (%) for the present and the future business situation, and for stocks – with inverted sign.

(b) United Kingdom: refers to the volume of sales for the time of the year.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/1990.

(a) Data are not seasonally adjusted.

(b) The confidence indicator is the arithmetic average of the balances (%) for the questions on business situation and past and expected evolution of demand.

(c) Component of the confidence indicator.

Information

The Directorate-General Financial and Economic Affairs (DG ECFIN) of the European Commission publishes the Business and Consumer Survey Results every month. The issues of January, April, July and October also include the quarterly survey results for the manufacturing industry and consumers. The April and November issues also include the investment survey results.

The data of the surveys is processed by DG ECFIN's Unit Economic situation, forecasts, business and consumer surveys (A3), Sector Business and consumer surveys and short-term forecast.
